AUDIT

Usability

6 issues · 0 critical · 1 major · 4 minor · 1 suggestion

The page uses a neumorphic design style that creates significant usability challenges, particularly regarding the affordance of interactive elements. The primary 'Verify Code' action lacks visual prominence and contrast, while secondary navigation links are indistinguishable from static text, potentially leading to user confusion during the authentication process.

Hierarchy

1

1. The primary 'Verify Code' button is visually recessed and has extremely low contrast against the card background, making it appear disabled or like a non-interactive decorative element.

Major

“Verify Code”

TRY

Apply a high-contrast background color to the primary button to clearly distinguish it as the main action on the page.

Spacing & alignment

1

2. The status message at the top of the card is left-aligned, which conflicts with the center-aligned layout of the heading, input fields, and buttons, creating a disjointed visual rhythm.

Minor

“Code sent to your Telegram”

TRY

Center-align the status message and its accompanying icon to maintain consistency with the rest of the card's content.

Captured on page · Minor

Density 1

3. Redundant messaging. The text inside the card repeats the information already provided in the sub-heading ('Enter the code sent to Telegram'), forcing the user to process the same information twice.

Minor

“Code sent to your Telegram”

TRY

Consolidate the instruction and the status message into a single, clear line of text to reduce visual clutter.

Captured on page · Minor

Affordance 1

4. The 'Back to login' action lacks standard interactive signifiers like a distinct color or underline, making it look like static body text rather than a clickable button.

Minor

“Back to login”

TRY

Use a standard link color or add an underline to clearly indicate that the text is an interactive element.

Captured on page · Minor

Consistency 1

5. The "Back to login" button is styled as a conventional blue text link, which creates a jarring visual disconnect from the heavy neumorphic styling applied to the input fields and the primary button.

Minor

“Back to login”

TRY

Apply a subtle neumorphic treatment (such as a soft pill-shaped "well" or "raised" container) to secondary actions to maintain a cohesive design language across the form.

Captured on page · Minor

Grouping

1

6. The instructional sub-heading is vertically orphaned in the whitespace between the main header and the card. This lack of proximity makes it feel disconnected from the form area where the user must actually perform the task.

Suggestion

| *"Enter the code sent to Telegram"*

TRY

Move the instructional text closer to the card or place it inside the card to create a stronger visual association with the input field.
